DETAILED ACTION

Response to Amendment

- 1. The Applicant's Amendments and Accompanying Remarks, filed June 3, 2005, have been entered and have been carefully considered. Claims 1-8, 22, 29 30 and 32 are amended, claim 28 is withdrawn and claims 1 27 ad 29 32 are pending. In view of Applicant's amendments, the Examiner withdraws the 35 USC 112, second paragraph rejection as detailed in the Office Action dated December 27, 2004. The invention as currently claimed is unpatentable for reasons herein below.
- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 16 recites that the fibrous mat further comprises "effective amounts" of fine particles of limestone, etc. What constitutes "effective amounts"? The Examiner cannot compare the claim to prior art because it is unknown what amounts would be considered "effective amounts". For the purposes of examination at this time, the Examiner will assume the presence of any amount of the listed substances would constitute an "effective amount".

Application/Control Number: 10/607,858 Page 3

Art Unit: 1771

Claim Rejections - 35 USC § 102

- 6. Claims 1 3, 7 15, 17 18, 21 24, 27, 29 and 32 remain rejected under 35 U.S.C. 102(b) as being anticipated by Jaffee (US 5,772,846). The details of the rejection can be found in paragraph 10 of the Office Action dated December 27, 2005. The rejection is maintained.
- 7. Claims 1, 16 and 25 remain rejected under 35 U.S.C. 102(b) as being anticipated by Kennedy et al. (US 5,308,692). The details of the rejection can be found in paragraph 11 of the Office Action dated December 27, 2004. The rejection is maintained.

Claim Rejections - 35 USC § 102/103

8. Claims 26 and 31 remain rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Jaffee (US 5,772,846). The details of the rejection can be found in paragraph 13 of the Office Action dated December 27, 2004. The rejection is maintained.

Claim Rejections - 35 USC § 103

9. Claims 4 – 6, 19 and 30 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Jaffee (US 5,772,846). The details of the rejection can be found in paragraph 14 of the Office Action dated December 27, 2004. The rejection is maintained.

Art Unit: 1771

10. Claim 20 remains rejected under 35 U.S.C. 103(a) as being unpatentable over Jaffee (US 5,772,846) in view of Horner, Jr. et al. (US 6,365,533). The details of the rejection can be found in paragraph 15 of the Office Action dated December 27, 2004. The rejection is maintained.

Response to Arguments

11. Applicant's arguments filed June 3, 2005 have been fully considered but they are not persuasive.

In response to Applicant's argument the limitations of claim 16 reciting "an effective amount" does not violate the requirements of 35 USC 112, 2nd paragraph, the Examiner respectfully argues the contrary. The phrase "an effective amount" does not provide any quantitative value for comparison to the prior art thereby making the limitation indefinite. Applicant indicates that in light of the specification's requirements that the amount of biocide present in the mat must resist fungal growth as delineated by ASTM Standard D3274. The Office is not equipped to perform experiments to determine whether the prior art would meet the ASTM Standard D3274 thus implying that the biocide is present in "an effective amount" as required by Applicant. Furthermore, the Applicant relies on limitations that are not claimed (e.g. resisting fungal growth as delineated by ASTM Standard D3274). The 35 USC 112, 2nd paragraph rejection of claim 16 is maintained.

Applicant argues that Jaffee does not teach with specificity an average fiber diameter range from about 9.5 to 12.5 microns. As discussed in the rejection, Jaffee teaches that the mat comprises a major portion of textile glass fibers and a minor portion of polymer fibers (column 2, lines 50 - 60). Jaffee teaches that the glass fibers have an average diameter from about 9 microns to 20 microns (column 3, lines 35 - 40). The Examiner acknowledges that Jaffee does

Art Unit: 1771

teach preferred embodiments where the fiber diameters are between 10 – 16 microns and instances where the diameter is 13, 15 and 16 microns. However, it should be noted that disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. See *In re Susi*, 440 F.2d 442, 169 USPQ 423 (CCPA 1971). Furthermore, although Jaffee does not teach with certain specificity of Applicant's desired range, it should be noted that Jaffe's range does overlap with Applicant's range. Applicant argues that the diameter range from 9.5 to 12.5 has unexpected results but has failed to provide evidence. If the claimed ranges have unexpected results, the burden is upon the Applicant to demonstrate that the claimed ranges are not a matter of simple optimization. The Examiner highly suggests to the Applicant to submit a 37 CFR 1.132 Declaration to establish unexpected results. In the Declaration, the Applicant should compare a sufficient number of tests both inside and outside the claimed range to show the criticality of the claimed range. *In re Hill*, 284 F.2d 955, 128 USPQ 197 (CCPA 1960) and must compare the claimed subject matter with the closest prior art to be effective to rebut a prima facie case of obviousness. The rejection is maintained.

In response to Applicant's comments regarding the glass transition temperature range required by Applicant, the Examiner acknowledges and apologizes for the error. However, Jaffee still discloses a range for the glass transition temperature which overlaps with the range of Jaffee. The rejection is maintained.

In response to Applicant's arguments that the limitation of "hydraulic set" should be given full patentable weight, the Examiner agrees. As discussed by Applicant in the arguments, a "hydraulic set" material encompasses gypsum. Jaffee and Kennedy are both

Art Unit: 1771

directed to mats for covering gypsum boards (see Jaffee, Title and Kennedy, column 1, lines 10 – 15).

Applicant argues that Kennedy does not teach with certain specificity an average fiber diameter range of about 9.5 - 12.5 microns. As discussed in the rejection, As to claim 1, Kennedy teaches that the fire resistant mat comprises a blended web of mineral wool fibers and monofilament glass fibers wherein the fibers are bonded by a heat settable fire resistant binder (column 3, lines 64 - 69). Kennedy teaches that the glass fibers used in the mat have a diameter from between 10 and 20 microns and have a length of about 1.2 - 4.4 (column 4, lines 43 - 50). The Examiner acknowledges that Kennedy does teach preferred embodiments where the fiber diameter is 15. However, it should be noted that disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. See In re Susi, 440 F.2d 442, 169 USPQ 423 (CCPA 1971). Furthermore, although Kennedy does not teach with certain specificity of Applicant's desired range, it should be noted that Jaffe's range does overlap with Applicant's range. Applicant argues that the diameter range from 9.5 to 12.5 has unexpected results but has failed to provide evidence. If the claimed ranges have unexpected results, the burden is upon the Applicant to demonstrate that the claimed ranges are not a matter of simple optimization. The Examiner highly suggests to the Applicant to submit a 37 CFR 1.132 Declaration to establish unexpected results. In the Declaration, the Applicant should compare a sufficient number of tests both inside and outside the claimed range to show the criticality of the claimed range. In re Hill, 284 F.2d 955, 128 USPQ 197 (CCPA 1960) and must compare the claimed subject matter with the closest prior art to be effective to rebut a prima facie case of obviousness. The rejection is maintained.

Art Unit: 1771

Applicant argues that Kennedy employs a blend of fibers and not fibers having a relatively restricted range of diameters of 9.5 to 12.5 microns. The Examiner believes that the Applicant is intending to argue that the claim language of "composed of" would exclude the presence of a blend of fibers. According to the MPEP 2111.03, the transitional phrase "composed of" has been interpreted in the same manner as either "consisting of" or "consisting essentially of," depending on the facts of the particular case. The Examiner has interpreted the transitional phrase "composed of" as "consisting essentially of" for the purposes of examination. The transitional phrase "consisting essentially of" limits the scope of a claim to the specified materials or steps "and those that do not materially affect the basic and novel characteristic(s)" of the claimed invention. *In re Herz*, 537 F.2d 549, 551-52, 190 USPQ 461, 463 (CCPA 1976) (emphasis in original) For the purposes of searching for and applying prior art under 35 U.S.C. 102 and 103, absent a clear indication in the specification or claims of what the basic and novel characteristics actually are, "consisting essentially of" will be construed as equivalent to "comprising." Therefore, the inclusion of other fibers with the glass fibers are considered to be

In response to Applicant's argument that the flame resistance and permeability as required by claims 26 and 31 are not inherent, the Examiner respectfully argues the contrary. Since the prior art reads on the present claim limitations, it is asserted that the claimed properties must be inherent to the prior product. If said property is not inherent, it is asserted that Applicant's claim must be incomplete. In other words, if Applicant's asserts a lack of inherency in the prior art product, then Applicant's claimed invention is missing an element that is critical

within the scope of the claim until the Applicant clearly indicates what are the basic and novel

characteristics of the invention. The rejection is maintained.

Art Unit: 1771

to the invention, which would patentably distinguish it from the known prior art. The rejection is maintained.

Conclusion

12. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer A. Boyd whose telephone number is 571-272-1473. The examiner can normally be reached on Monday thru Friday (8:30am - 6:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
